

时域微分特性例1

$$f(t) = \frac{1}{t^2} \longleftrightarrow F(j\omega) = ? \quad f^{(n)}(t) \longleftrightarrow (j\omega)^n F(j\omega)$$

解: $\text{sgn}(t) \longleftrightarrow \frac{2}{j\omega} \quad \frac{2}{jt} \longleftrightarrow 2\pi \text{sgn}(-\omega)$

$$\frac{1}{t} \longleftrightarrow -j\pi \text{sgn}(\omega) \text{ 符号函数是奇函数}$$

$$\frac{d}{dt} \left(\frac{1}{t} \right) \longleftrightarrow -(j\omega) j\pi \text{sgn}(\omega) = \pi \omega \text{sgn}(\omega)$$

$$\frac{1}{t^2} \longleftrightarrow -\pi \omega \text{sgn}(\omega) = -\pi |\omega|$$
