

平移、展缩、反折相结合举例

例 已知f(t)如图所示,画出f(-2t-4)。

也可以先压缩、再平移、最后反转。ƒ(-2t-4)

若已知f(-4-2t),画出f(t)。

自变量t

t=-2

t=0

t=2

左移4, 得f(t)

0

-2t-4=2, t=-3
