

用定义计算卷积

解:
$$y_{zs}(t) = f(t) * h(t)$$

$$= \int_{-\infty}^{\infty} e^{\tau} [6 e^{-2(t-\tau)} - 1] \varepsilon(t-\tau) d\tau$$

$$\triangleq t < \tau, \quad \varepsilon(t-\tau) = 0$$

当
$$t < \tau$$
, $\varepsilon(t - \tau) = 0$
 $y_{zs}(t) = \int_{-\infty}^{t} e^{\tau} [6e^{-2(t-\tau)} - 1] d\tau = \int_{-\infty}^{t} (6e^{-2t}e^{3\tau} - e^{\tau}) d\tau$

$$= e^{-2t} \int_{-\infty}^{t} (6e^{3\tau}) d\tau - \int_{-\infty}^{t} e^{\tau} d\tau$$

$$= e^{-2t} \cdot 2e^{3\tau} \Big|_{-\infty}^t - e^{\tau} \Big|_{-\infty}^t = 2e^{-2t} \cdot e^{3t} - e^t = e^t$$
