

平移与反转相结合举例

例 已知f(t)如图所示,画出f(2-t)。

法一: ①先平移 $f(t) \rightarrow f(t+2)$

②再反转 $f(t+2) \rightarrow f(-t+2)$

左移↓

法二: ①先反转 $f(t) \rightarrow f(-t)$

②再平移
$$f(-t) \rightarrow f(-t+2) = f[-(t-2)]$$
